

Taber Abrasion Tester

The Pacorr Taber Abrasion Tester is a precision instrument designed to evaluate the wear and abrasion resistance of materials such as plastics, coatings, textiles, and leather. It ensures reliable performance testing under controlled conditions, helping manufacturers maintain product durability, quality standards, and compliance with industry specifications.

Specification

- Dual rotating abrasive wheels for uniform wear testing
- Adjustable load weights for controlled pressure application
- Digital display for accurate cycle count and test monitoring
- Variable speed control for customized testing conditions
- Sturdy and vibration-free construction for consistent results
- Compatible with multiple abrasive wheel types (CS-10, H-18, etc.)
- Sample mounting platform with secure clamping system
- Automatic stop feature after preset cycles
- Low maintenance and user-friendly operation
- Complies with international testing standards (ASTM, ISO)

Model: PCTAT-2.0

Features

- High precision testing for accurate abrasion resistance evaluation
- User-friendly interface for easy operation and quick setup
- Durable construction ensuring long-lasting performance
- Consistent and repeatable test results
- Versatile testing for a wide range of materials
- Compact design suitable for laboratory environments
- Low noise and smooth operation
- Efficient performance with minimal maintenance
- Safety-focused design with protective components
- Reliable for quality control and research applications
