

TDS Meter

The Pacorr TDS Meter is a compact and efficient device used to measure the total dissolved solids in water. It helps determine water purity by detecting dissolved salts and minerals, making it ideal for laboratories, industrial applications, aquariums, and drinking water quality assessment.

Specification

- High-precision sensor for accurate TDS measurement
- Measurement range suitable for various water types
- Digital LCD display for clear readings
- Automatic temperature compensation (ATC)
- Quick response time for instant results
- Compact, handheld, and portable design
- Low power consumption with long battery life
- Durable construction for regular use

Model: PCTDS-001

Features

- Provides quick and accurate measurement of total dissolved solids
- Easy-to-use interface with instant digital readings
- Compact and portable design for on-the-go testing
- Automatic temperature compensation for precise results
- Suitable for drinking water, aquariums, and industrial use
- Energy-efficient with long battery life
- Durable build for extended usage
- Ideal for water quality monitoring and testing applications
