

# Puncture Resistance Tester

## Product Info :

**Puncture Resistance Tester** is one instrument that is used in the packaging industries for testing the packaging materials that are being used in the different industries. These packaging materials are used for manufacturing containers that are further used for packaging of different products. Now these packaging containers are responsible for keeping the products inside them safe and maintain their quality as well. For this, the packaging containers must have a proper strength to provide resistance towards forces that may damage the packaging. There are many different forces that can damage to the packaging or puncture it. The Puncture Resistance Tester is the one instrument that is used for testing the ability of the packaging materials such as cardboard, corrugated sheet and paper to resist any puncture due to any external force exerted on the packaging.

Pacorr is one of the premium puncture resistance tester manufacturers and suppliers and offers one of the most accurate and efficient testing instrument that can be used extensively in the packaging and paper industry to test the sturdiness and strength of the paper products to ensure the best quality of the products.

The packaging of the products is of great importance as these packaging are mainly responsible for keeping the products safe and sound when they are stored and transported. To ensure that the products will be safe during their journey, it is essential that quality and strength of the packaging containers is of best level. In order to ensure best quality of containers, the quality and strength of the materials also must be tested accurately and precisely. There are many different test procedures that must be run on the materials to ensure that the quality of materials is of best level.

## TECHNICAL DATA :

- Range of Weights: 6, 12, 24, 48 Joules
- Pendulum arm travels through 90°
- Display: Digital (LED)
- Power: Single Phase, 220V AC, 50Hz
- Standards: ASTM D781.
- Incorporates Micro Processor-based control panel
- Stiff, strong steel frame to avoid losses of energy
- Triangular pyramid striking head
