

Illuminated Magnifier

Product Info :

Illuminated magnifier is one of most commonly found testing and inspection instrument that is used in many different industries for inspection of small and tiny parts and materials that are hard to see with a naked eye. The illuminated magnifier offered by the Pacorr is a very sophisticated testing instrument that can help the industries in inspection of the very small processes and spare parts when they are being put at places during the manufacturing processes. The instrument is best for inspection in many different industries such as textiles, clock manufacturing and so forth.

Pacorr is renowned Illuminated magnifier manufacturers and suppliers offering one of the most important testing instruments in many different industries where it is used for inspection of tiny and small parts for better accuracy and ease of work. It is used in different industries for different purposes.

The modern industrial processes include many different processes to complete the whole manufacturing chain. In the textile industries, the illuminated magnifier is used for inspection of the fabrics for thread counts. The thread count is one of the most important attributes of fabrics. If there is any deflection in the thread count, it can ruin the quality of the products hence need to be inspected properly and accurately. The illuminated magnifier is used for that. In the medical field, the instrument can be used for studying various ailments. The instrument is equipped with high quality high power convex lens for better inspection and magnifying power. The LED light given with the instrument gives light from the top to give a better view. The illumination angle and height of the illumination can be used according to the convenience of the user.

TECHNICAL DATA :

- Model: PCM-1
- Magnification: 5X
- Lens Used: Imported Convex Lens
- Light Used: White CFL
- Changeable viewing angle and height of light.
